

Renewable Energy Asia 2007
How Can Government & Private Sector Work Efficiently to Promote Renewable Energy Policy in Thailand.

Dr. Somsak Vivatpanachart
Vice Chairman of Energy Committee,

BITEC, Bangkok, Thailand
7

- Low public awareness of necessity to develop renewable energy in Thailand.
- Government should raise awareness to gain public support for R.E. policy nation wide.
- Co-operation with

and Strategy

- Clear and creditable to investors and consumers.
- Give incentive to invest in R.E. production.
- Not overburden the consumer.
- Pricing of R.E. have to be competitive and providing reasonable

Supporting Fund

- Should be set up urgently.
- Needed to provide financial support for R.E. producers.
- As a developing country, there is a limit to acquire big fund.

Development Projects

- Give priority to projects which are economically feasible and do not require excessive financial support.
- Maximise the use of locally available

3. Biofuel Project

- Government and private jointly develop Biofuel industry using agriculture products, tapioca, sugar and palm oil.

**Distributed Electricity
Generation Plants**
using locally available
biomass fuel to
provide power to the
local community.
- D.G. not only promote
R.E. development
but could cut cost long
term.

**Equipments
Industry**
- To replace import.
- Cut cost.
- Create new jobs and
businesses.
- Will enhance R.E.
development.
